

SECTION B - STRUCTURE QUESTIONS

[90 MARKS]

QUESTION 1 (15 MARKS)

Your company has been hired as IT consultant to assist 'Exotic Treat' company in developing a newly system to manage their related daily-routines business activities; at the same time to solve their existing manual ways for record keeping.

Answer the following questions (i) and (ii) based on the following case study of 'Exotic Treat' company.

The 'Exotic Treat' company is a small, independent business that sells exotic sweets and cakes to the public. The proprietor is very keen on baking and specializes in making homemade sweets and cakes for sale in the shop. As well as making much of the ^{high-maint} confectionery sold in the shop, the proprietor also buys sweets and some cakes from suppliers to increase the range of products for sale.

At the end of each day the proprietor reviews the sales of the homemade items. He then decides how many sweets and cakes to make for the next day. This is also partly to ^{to service} replenish any stock that needs to be bought from suppliers, and also to keep track of the sales. Once a week the proprietor checks the stock to dispose of anything that is past its 'use by' date. He also checks to see if any raw ingredients for the

INSTRUCTION : ANSWER ALL QUESTIONS.
Please write your answer in the answer sheets.

QUESTION 1 (10 marks)

Answer question (a) – (c) based on Figure 1 and Figure 2 below:

Food Service Supplies (FSS) is a Malaysia-based provider of perishable foodstuffs to the catering industry. Their main clients are hotels, schools and hospitals, although they have also recently started supplying professional catering companies.

Orders are received via three channels: 1) calls directly from the customer to a telesales function, 2) online orders placed directly by the customer via the internet and 3) receipt of paper order forms into the sales department's data processing team.

Upon receipt of an order it is entered into the Sales Order Processing (SOP) system where it is validated and sent to the Stock Management System (SMS) used by the warehouse. The SMS manages the picking process and, when an order has been picked, the details are transferred to the Traffic Management System (TMS). The TMS is used by the Traffic Office to schedule and track the dispatch and delivery process. Finally, the signed Delivery Note (signed by the customer upon receipt of the goods) is returned by the delivery driver to the Accounts Payable team where it is processed in the Central Accounts System (CAS) and an invoice generated for the customer. *TPS*

As part of a new continuous service improvement initiative FSS Managing Director Aishah Ahmad has initiated a project to investigate the requirements for a proposed Service Level Reporting (SLR) system to report on performance and revenue across FSS for the managerial level use. Figure 2 shows an organization chart of FSS. *MIS*

Figure 1: Food Service Supplies Description
