SECP2523 DATABASE

SESSION 2024/2025 - SEMESTER 1

ALTERNATIVE ASSESSMENT REPORT: PHASE 2

Name	MUHAMMAD AFIQ DANIAL BIN ROZAIDIE
IC No. / Matric No.	041204011037 / A23CS0117
Year / Program	2 / SECPH
Section	01
Lecturer Name	ROZILAWATI BINTI DOLLAH @ MD. ZAIN
Case Study	Member Application Module
System Name	System Cooperative KADA
Group Name	AlphaTech

SECTION C (SQL AND INTERFACE IMPLEMENTATION)

3.1 SQL Statement (DDL & DML)

Create table for Membership Application

```
CREATE TABLE `tb_membership` (  
  `m_app_id` int(11) NOT NULL,  
  `m_nostaff` int(11) NOT NULL,  
  `m_ic` varchar(12) NOT NULL,  
  `m_pf` int(11) NOT NULL,  
  `m_name` varchar(150) NOT NULL,  
  `m_status` varchar(20) NOT NULL,  
  `m_address` varchar(100) NOT NULL,  
  `m_postcode` int(5) NOT NULL,  
  `m_state` int(11) NOT NULL,  
  `m_gender` char(1) NOT NULL,  
  `m_religion` varchar(20) NOT NULL,  
  `m_race` varchar(20) NOT NULL,  
  `m_email` varchar(50) NOT NULL,  
  `m_password` varchar(128) NOT NULL,  
  `m_position` varchar(20) NOT NULL,  
  `m_position_grade` varchar(4) NOT NULL,  
  `m_office_address` varchar(100) NOT NULL,  
  `m_office_postcode` int(5) NOT NULL,  
  `m_office_state` int(11) NOT NULL,  
  `m_fax` varchar(11) DEFAULT NULL,  
  `m_tel` varchar(12) NOT NULL,  
  `m_tel_house` varchar(11) DEFAULT NULL,  
  `m_salary` float NOT NULL,  
  `m_bank` int(11) NOT NULL,  
  `m_bank_no` varchar(20) NOT NULL,  
  `m_appdate` timestamp NOT NULL DEFAULT current_timestamp(),  
  `m_appstatus` int(11) NOT NULL DEFAULT 1,  
  `m_bod_id` int(11) NOT NULL DEFAULT 200  
);
```

Insert data into Membership Application

```
INSERT INTO tb_membership (  
    m_nostaff, m_ic, m_pf, m_name, m_status, m_address, m_postcode, m_state,  
    m_gender, m_religion,  
    m_race, m_email, m_password, m_position, m_position_grade, m_office_address,  
    m_office_postcode, m_office_state, m_fax,  
    m_tel, m_tel_house, m_salary, m_bank, m_bank_no  
) VALUES (  
    '{$memberData['fnostaff']}', '{$memberData['fic']}', '{$memberData['fnopf']}',  
    '{$memberData['fname']}',  
    '{$memberData['fstatus']}', '{$memberData['fhaddr']}',  
    '{$memberData['fhpostcode']}', '{$memberData['fhstate']}',  
    '{$memberData['fgender']}', '{$memberData['freligion']}',  
    '{$memberData['frace']}', '{$memberData['femail']}',  
    '$hashedPassword', '{$memberData['fposi']}', '{$memberData['fgradeposi']}',  
    '{$memberData['foaddr']}',  
    '{$memberData['fopostcode']}', '{$memberData['fostate']}',  
    '{$memberData['fnofax']}', '{$memberData['fnotel']}',  
    '{$memberData['fnohouse']}', '{$memberData['fsalary']}',  
    '{$memberData['fbank']}', '{$memberData['fnoacc']}'  
)"
```

Select data from Membership Application

```
SELECT * FROM tb_membership  
    LEFT JOIN tb_state AS state1 ON tb_membership.m_state = state1.state_id  
    LEFT JOIN tb_state AS state2 ON tb_membership.m_office_state =  
state2.state_id  
    LEFT JOIN tb_bank ON tb_membership.m_bank = tb_bank.bank_id  
    LEFT JOIN tb_appstatus ON tb_membership.m_appstatus =  
tb_appstatus.app_id  
    WHERE m_app_id = $membership_id
```

Select data from Membership Application

```
SELECT * FROM tb_membership  
    LEFT JOIN tb_state AS state1 ON tb_membership.m_state = state1.state_id  
    LEFT JOIN tb_state AS state2 ON tb_membership.m_office_state =  
state2.state_id  
    LEFT JOIN tb_bank ON tb_membership.m_bank = tb_bank.bank_id  
    LEFT JOIN tb_appstatus ON tb_membership.m_appstatus =  
tb_appstatus.app_id  
    WHERE m_appstatus = '1'
```

Insert data into CharityFee

```
INSERT INTO tb_charityfee (  
    ch_nostaff, ch_entryfee, ch_modalshare, ch_fee, ch_depo, ch_charity,  
    ch_fixsaving, ch_other  
    ) VALUES (  
    '$fnostaff', '$entryfee', '$share', '$modalfee', '$depo', '$charity', '$saving',  
    '$other'  
    );
```

Create table for Language

```
CREATE TABLE `tb_lang` (  
    `id` int(11) NOT NULL,  
    `code` varchar(2) NOT NULL,  
    `name` varchar(50) NOT NULL  
);
```

Insert data into Language

```
INSERT INTO `tb_lang` (`id`, `code`, `name`) VALUES  
(1, 'ms', 'Bahasa Melayu'),  
(2, 'en', 'English'),  
(3, 'zh', '中文'),  
(4, 'hi', 'हिंदी'),  
(5, 'ar', 'العربية');
```

Create table for Translation

```
CREATE TABLE `tb_transl` (  
    `id` int(11) NOT NULL,  
    `language_id` int(11) DEFAULT NULL,  
    `keyword` varchar(50) NOT NULL,  
    `translation` text NOT NULL  
)
```

Alter Table;

```
ALTER TABLE `tb_lang`  
    ADD PRIMARY KEY (`id`);
```

```
ALTER TABLE `tb_transl`  
    ADD PRIMARY KEY (`id`),  
    ADD KEY `language_id` (`language_id`);
```

3.2 Interface Implementation

The image displays three screenshots of a login interface for 'Kooperasi Kakitangan KADA Kelantan Berhad'. Each screenshot shows the same form in a different language: Bahasa Melayu (top), English (middle), and Chinese (bottom). The interface features a dark blue background with a white login box in the center. The login box contains the organization's logo, name, and title. It includes input fields for 'ID Kakitangan' (Staff ID) and 'Kata Laluan' (Password), a 'Log Masuk' button, and a link to register if the user does not have an account. The language is selected via a dropdown menu in the top right corner.

SECTION D (CONCLUSION AND REFLECTION)

4.1 Conclusion

From this module that I have improved, I achieved the language option that is suitable for all varieties of people out there. Therefore, almost everyone can use this website without using apps like google lens or google translate anymore. Nowadays, I may suggest it is better to use AI as a translator to translate for them instead of to figure out the language one by one. This, in addition to increasing the accessibility of the module, reflects innovation that is forward-thinking in addressing the needs of a global audience.

4.2 Reflection

I and my other friends formed a group of four to create a web server for our WBL project. Everyone will be involved to complete the project together. I take part doing the Membership Application module while the other three have to do a Loan Application module, Monitor Financial Status module and Manage Policies module.

I was feeling a bit nervous because I know this project will be hard for me as a student for the first time to create a web server. To overcome that feeling, we just follow the guidance from the lecturer one by one and slowly create the page bit by bit. We only have difficulties with time because not everyone has their free time for a whole day. Therefore, we discuss first what day that we are all free then proceed to gather and continue the project.

The good experience is that we are able to learn more details about new computer languages while doing this project such as php, javascript, html and so much language. The bad experience is that some languages like javascript and php are difficult to understand in order to use them correctly. The difficulty of using those languages affected us to use help from AI like ChatGPT to make us more understand what some functions are used for.

The reason I chose this incident is because we can utilize the AI to help us understand some of the code and not just blindly use them. The main concern is I can still use this tool but I also need to learn what is this use for in order to be capable doing some task without help from other tool or people.

I discovered that using AI tools can make our project faster and more efficient. I learn we also need to use the AI tools in a correct way and also gain some knowledge from them. The question that remains is will AI improve in the future so it can make our task faster?

I also need to learn from something else instead of AI. It is because they do not always give the right answer, so I might learn it from the book or the professional lecture. Therefore, I can know whether it is right or wrong.
