

Slide Deck Content

(Wrap-up: Chapters 1 & 2)

Slide 1:

Title:

👉 Wrap-Up Session: Chapter 1 & Chapter 2

Points:

- Quick review of key ideas
 - Check students understanding
 - Students can ask questions + clear doubts
-

Slide 2: What we covered in Chapter 1

Title:

📖 Chapter 1: Java Basics + OOP Intro

Points:

- Object-Oriented Programming (OOP)
 - Java basics and syntax
 - Writing your first Java program
 - Variables, data types, input/output
 - **Narrowing & Widening conversions**
 - **Java Packages** – organizing your code
-

Slide 3: What is OOP?

Title:

☐ Object-Oriented Programming (OOP)

Points:

- Code organized into **classes** and **objects**
 - 4 key concepts:
 - Encapsulation
 - Abstraction
 - Inheritance
 - Polymorphism
-

Slide 4: Writing Your First Java Program

Title:

 Basic Java Program Structure

Code :

```
public class Main {  
    public static void main(String[] args) {  
        System.out.println("Hello, world!");  
    }  
}
```

Slide 5: Java Variables and Input

Title:

 Variables and Input

Points:

- Declare variables with data types
- Use Scanner for input
- System.out.println() for output

Code :

```
Scanner input = new Scanner(System.in);  
int age = input.nextInt();
```

Slide 6: Narrowing & Widening Data Types

Title:

 Type Conversion in Java

Points:

- **Widening (Implicit):** small → large
e.g., int → double
- **Narrowing (Explicit):** large → small
e.g., double → int (use casting)

Code Example:

```
double d = 10;  
int i = (int) d;
```

Slide 7: Using Java Packages

Title:

 Packages in Java

Points:

- Packages group related classes
 - Helps with code organization
 - Use `import` to bring in classes
 - Example: `import java.util.Scanner;`
-

Slide 8: Useful Java Classes**Title:**

 Java API Classes You Used

Points:

- `String` – for text
 - `Scanner` – for user input
 - `JOptionPane` – pop-up dialogs
-

Slide 9: Chapter 2 – Classes and Objects**Title:**

 Chapter 2: Custom Classes & Object Concepts

Points:

- Creating your own class
 - Making and using objects
 - Passing objects to methods
 - Understanding `static`
-

Slide 10: Example – Your Own Class**Title:**

 Creating a Class + Object

Code :

```
public class Student {  
    String name;  
    int age;  
}
```

```
Student s1 = new Student();
```

Slide 11: Passing Objects & Static

Title:

📌 Passing Objects + Static Things

Points:

- Pass objects as parameters
 - Objects are passed by reference
 - `static` methods/variables = shared by all objects
 - Use static for counters, constants, or helper methods
-

Slide 12: Final Recap

Title:

🌟 Quick Summary

Bullet Points:

- Java = object-oriented, beginner-friendly
 - Use classes to model real things
 - Work with user input/output
 - Convert data types safely (narrowing/widening)
 - Understand how packages organize code
-

Slide 13: Your Turn – Check-In

Title:

✓ One Thing You Got / ? One Thing You're Unsure About

Instructions:

Type in the chat:

- ✓ One thing you feel confident about
 - ? One thing you still want to review
-

Next week

Chapter 3 : Enumerated Type, Wrapper Class, and Java Package

Chapter 4 : **Arrays**
