

1. Given the following code, what will be the value of `finalAmount` when it is displayed?, if it cannot be displayed, identify any errors.

[Berdasarkan kepada kod berikut, nyatakan nilai pada `finalAmount` apabila ianya berjaya dipamerkan, jika ianya tidak dapat dipaparkan, kenalpasti jenis ralat yang berlaku.]

```
1 public class Order {
2     private int orderNum;
3     private double orderAmount;
4     private double orderDiscount;
5
6     public Order(int orderNumber, double orderAmt,
7                 double orderDisc)
8     {
9         orderNum = orderNumber;
10        orderAmount = orderAmt;
11        orderDiscount = orderDisc;
12    }
13    public int getOrderAmount() {
14        return orderAmount;
15    }
16    public int getOrderDisc() {
17        return orderDisc;
18    }
19 }
20
21 public class CustomerOrder {
22     public static void main(String[] args) {
23         int ordNum = 1234;
24         double ordAmount = 580.00;
25         double discountPer = .1;
26         Order order;
27         double finalAmount = order.getOrderAmount() -
28             order.getOrderAmount() * order.getOrderDisc();
29         System.out.println("Final order amount = $" +
30                             finalAmount);
```

2. Given the following Java program. Draw the class diagram for the class/es. Compile and run the program. Explain how the output is produced.

[Diberi atur cara Java. Lukiskan rajah kelas bagi kelas-kelas. Kompil dan laksanakan atur cara. Terangkan bagaimana output dihasilkan.]

```

1  class Rectangle {
2      // Data members
3      private double width;
4      private double height;
5
6      // Constructor
7      public Rectangle(double w, double h) {
8          width = w;
9          height = h;
10     }
11
12     public double getWidth() {
13         return width;
14     }
15
16     public double getHeight() {
17         return height;
18     }
19
20     public double findArea() {
21         return width * height;
22     }
23 }
24
25 public class Exercise6_1 {
26     public static void main (String[] args) {
27         Rectangle myRectangle = new Rectangle(3, 10);
28         System.out.println("The area of a rectangle with ");
29         System.out.println("width " + myRectangle.getWidth());
30         System.out.println(" and height ");
31         System.out.println(myRectangle.getHeight() + " is ");
32         System.out.println(myRectangle.findArea());
33
34         Rectangle yourRectangle = new Rectangle(2.0, 2.5);
35         System.out.println("The area of a rectangle with ");
36         System.out.println("width" + yourRectangle.getWidth());
37         System.out.println(" and height ");
38         System.out.println(yourRectangle.getHeight() + " is ");
39         System.out.println(yourRectangle.findArea());
40     }
41 }

```

Given the program below, answer the following questions:

[Diberi atur cara di bawah, jawab soalan-soalan berikut:]

```

public class Car {

```
