

Name : MUHAMMAD AFIQ DANIAL BIN ROZAIDIE
Matric Num : A23CS0117

1. Which of the following is the correct way to get the first value in a ArrayList called data?

- A. data[0]
- B. data.get[1]
- C. data.first()
- D. data.get(0)

2. Which of the following is *false* about an interface?

- A. It is a type of class.
- B. The methods in an interface will be public and abstract.
- C. It is like a contract in that the class that implements the interface must provide the methods defined in the interface.
- D. You can create an object of an interface type.

3. What will print when the following code executes?

```
List<Integer> numlist = new ArrayList<Integer>();  
numlist.add(new Integer(11));  
numlist.add (new Integer(23));  
numlist.add (new Integer(35));  
numlist.remove(1);  
System.out.println(numlist);
```

- A. [23, 35]
- B. [11, 23, 35]
- C. [11, 23]
- D. [11, 35]

4. Which of the following is an example of an aggregation relationship?

- A. A House class and a Room class, where a room cannot exist without a house.
- B. A Course class and a Student class, where multiple students can take a course, and students exist independently of the course.
- C. A Car class and an Engine class, where the engine is an integral part of the car and cannot exist separately.
- D. A Frog class and an Animal class, where a frog is a type of animal.

5. Which concept of Java is a way of converting real world objects in terms of class?

- A) Polymorphism
- B) Encapsulation
- C) Abstraction
- D) Inheritance

6. Method overriding is combination of inheritance and polymorphism?

- A) True
- B) false

7. The House class creates and owns a list of Room objects as its parts. Rooms are created and managed by the house, and they cannot exist independently outside the house. If the house is destroyed, the rooms are also destroyed.

Which type of class relationship is best represented by the above scenario?

- A. Association
- B. Aggregation
- C. Composition
- D. Inheritance

8. Which of the following is **true** about exception handling in Java?

- A. The finally block is executed only if an exception is thrown.
- B. You can catch multiple exception types using a single catch block in Java 7 and above.
- C. A try block can exist without a catch or finally block.
- D. Only checked exceptions can be handled using try-catch.

9.

```
public class TestException {  
    public static void main(String[] args) {  
        try {  
            int result = 10 / 0;  
        } catch (ArithmeticException e) {  
            System.out.println("Arithmetic Exception caught");  
        } finally {  
            System.out.println("Finally block executed");  
        }  
    }  
}
```

- A. Program terminates with an error
- B. Only "Finally block executed"
- C. "Arithmetic Exception caught" followed by "Finally block executed"
- D. "Arithmetic Exception caught" only

10. Which of the following is true about abstract classes in Java?

- A. They can be instantiated directly
- B. They can only contain concrete methods
- C. They can have abstract methods (methods without implementation)
- D. They cannot be inherited
