Project Title

Title of the current project is Teacher Management System (GENIUSAQIL OS)

Project Background

The Teacher Management System (GENIUSAQIL OS) is proposed for Tadika Aqil Miqail to address several challenges highlighted by the industry partner regarding the current management of teachers and administrative processes. At present, key operations such as maintaining teacher records, managing leave applications, assigning daily duties, tracking training activities, evaluating performance, and handling internal reports are carried out manually or using separate platforms. This fragmented approach leads to inefficiencies, difficulty in tracking information, lack of coordination, and increased administrative workload. It also creates issues such as inconsistent task execution, limited transparency, and challenges in monitoring teachers' responsibilities effectively .

To overcome these problems, the goal of the system is to develop an integrated digital platform that consolidates all teacher-related processes into a single system. The proposed solution includes modules such as Teacher Record, Leave Management, Task & Duty Manager, Teacher Training Tracker, Teacher Performance Tracker, and Teacher Reporting System, each designed to streamline specific operations. By automating processes, centralizing data, and providing better tracking and reporting features, the system aims to improve efficiency, enhance accountability, support better decision-making, and ensure smoother daily operations within the kindergarten

Target Users

The target users for the GENIUSAQILOS Teacher Management System are:

1. **Principal / Admin**

The Principal or Admin is responsible for managing the entire system. They will handle teacher records, approve or reject leave applications, assign and monitor tasks and duties, track teacher training and performance, and review reports submitted by teachers. They also ensure smooth school operations through centralized system control.

2. **Teachers / Staff**

Teachers and staff will use the system to update their personal information, apply for leave, check assigned duties, submit training details, view performance evaluations, and report any issues such as maintenance problems or workplace concerns. The system helps them manage their daily responsibilities more efficiently.

Mandatory Modules

The mandatory baseline modules for this project are Login, Registration, and Manage User. These modules are compulsory for every team and must be included together with the six industry modules.

Mandatory Module	Description	Lead Member
Login	Allows authorised users such as admin, teachers, and management to securely access the system using their registered credentials.	Dheshieghan
Registration	Allows new users to create an account with basic information and validation before accessing the system.	Dheshieghan
Manage User	Allows the admin to view, edit, remove, and manage user accounts based on their roles, such as teacher, admin, or management.	Pravinraj

Six Industry Modules & Module Distribution Table

The industry module for this project includes 6 modules: Teacher Records, Leave Management, Task & Duty Manager, Teacher Training Tracker, Teacher Performance Tracker, and Teacher Reporting System. These modules are the core for the whole project,

Industry Modules	Description	Lead Member
Teacher Records	This module allows teachers to upload, view, access, edit and update their important information or documents like id, birth certificate and so on. They are also able to track their document status	Ziyaad
Leave Management	This module allows the teachers to apply leave and track their leave balance. Then, the approval and rejection will notify the teacher by principal. The leave data will be recorded.	Dheshieghan
Task & Duty Manager	This module allows management to assign and manage teachers' daily and scheduled duties. It generates fair schedules based on availability, provides task checklist, tracks completion and send reminders to ensure responsibilities are carried out properly	Pravinraj
Teacher Training Tracker	This module records all teacher training activities, including title, date, and location, while monitoring each teacher's progress against a minimum training target. Generates yearly reports to ensure continuous professional development.	Afiq
Teacher Performance Tracker	This module evaluates teacher performance through a customisable KPI checklist with auto-calculated scores, providing a clear overview of each teacher's overall performance. Also stores warning letters and misconduct records, with yearly reports generated for review.	Afiq & Adib
Teacher Reporting System	This module allows teachers to easily submit reports on issues such as damage, bullying, harassment, or complaints, with the option for anonymous reporting and photo uploads. A built-in notification system keeps all parties updated whenever action is taken on a report.	Adib

Justification

The distribution of modules among team members was carefully planned based on each member's workload capacity, technical strengths, and the logical grouping of related functionalities. Dheshieghan was assigned the Login and Leave Management modules because both involve authentication logic, user session handling, and form-based interactions, making it natural to group them under one developer who already manages system access. Pravinraj handles both Manage User and Task & Duty Manager, as both modules revolve around administrative control where managing user roles and overseeing teacher responsibilities are closely related operations that benefit from a consistent development approach. Afiq was assigned the Teacher Training Tracker and co-leads the Teacher Performance Tracker, since both modules deal with monitoring teachers' professional growth and generating yearly reports, requiring similar data structures and reporting logic. Adib co-leads the Teacher Performance Tracker and solely leads the Teacher Reporting System, as both involve record-keeping of sensitive matters such as misconduct and complaints, ensuring consistent handling of confidential data. Finally, Ziyaad manages the Teacher Records module independently, as it serves as the foundational data source that other modules reference, requiring focused attention to document management and data integrity. Overall, this distribution ensures a balanced workload, minimizes cross-dependency conflicts, and allows each member to develop deeper expertise in their assigned area while maintaining cohesion across the entire system.

Conclusion

The proposed GENIUSAQIL OS (Teacher Management System) aims to transform the current administrative landscape of Tadika Aqil Miqail. The changes are by replacing the manual processes with digital platforms. From Teacher Records to Teacher Reporting Systems, the aim is to provide administrative or Principal with better oversight through automated performance and training tracking. It allows the Principal to manage daily school activities while observing the other teachers. So, through the centralization of data and automation of routine tasks, GENIUSAQIL OS will improve overall accountability, support continuous professional development, and ensure smoother daily operations for the kindergarten.
